THE REPLY FILED FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE. Therefore, further action by the applicant is required to avoid abandonment of this application. A proper reply to a final rejection under 37 CFR 1.113 may only be either: (1) a timely filed amendment which places the application in condition for allowance; (2) a timely filed Notice of Appeal (with appeal fee); or (3) a timely filed Request for Continued Examination (RCE) in compliance with 37 CFR 1.114.

The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

  - (d) ☐ they present additional claims without canceling a corresponding number of finally rejected claims.

NOTE: See Continuation Sheet.

3. ☐ Applicant's reply has overcome the following rejection(s): \_\_\_\_\_.
4. ☐ Newly proposed or amended claim(s) \_\_\_\_\_ would be allowable if submitted in a separate, timely filed amendment canceling the non-allowable claim(s).

Continuation of 2. NOTE: : the amendment to claim 40 adding the language of " such that said continuous laminate layer is a bottom to said void " raises new issues that would require further consideration and/or search. In regards to Hegel substrate having an underlying substrate. Hegel discloses a multi layer structure having a conductive layer and an underlying substrate (i.e. insulating layer supporting the conductive layer). Juskey discloses a substrate including a solder resist layers and an underlying substrate. The substrate can include a variety layers to form the final structure of substrate. In regards to claim 32, Hegel discloses one continuous laminate layer and a second laminate layer over the continuous layer (i.e. the portion of the layer that is near the wire bonding so as to define an underlying cavity.
